

Burlington Northern Santa Fe Railway (BNSF) Former Maintenance and Fueling Facility – Skykomish

The Washington State Department of Ecology (Ecology) will hold the second in a community meeting series to discuss potential cleanup options for the BNSF-Skykomish site. Ecology staff will informally present cleanup options and a discussion will follow.

In October, *excavation* (digging up contaminated soil) and *thermal treatment* (heating contaminants in soil and groundwater to mobilize them toward wells for removal) were described. Handouts on these cleanup options are available for review at the library or by contacting Ecology (see below).

At the December 2nd meeting, information will be provided on an in-place groundwater and soil treatment that does not involve excavation. The discussion will include a technology combining bioventing, vacuum-enhanced pumping of oil from the groundwater and soil, and bioremediation.

CLEANUP OPTIONS COMMUNITY MEETING

**December 2, 2002
6:00 – 7:30 PM**

**Skykomish Community Center
114 West Railroad Avenue, Skykomish**
